

TRICOCURE MOUSSE POST-IMPLANT SHAMPOO

Specific ultra-delicate formula, made for cleansing and hygiene of the scalp and hair, post-transplant (autologous and/or artificial). Rich in active ingredients: it soothes, sanitizes by reducing the proliferation of micro-organisms and promotes scarring of the scalp. It supports the restoration of optimal physiological conditions for the regrowth of grafted hair, contributing to re-epithelialization. The hair will be wrapped in a delicate protective foam that will minimize stress during washing (a fundamental aspect in the first month for the success of the surgery).

Regular use helps to obtain stronger and healthier hair, also helping it to grow while maintaining frequent hygiene of the scalp.

Use: Dose the foam on the palm of your hand and spread it gently and evenly so as to wrap the hair from the root. Leave the product on for a few minutes, so that the benefit of the active ingredients can reach the scalp. Rinse with warm water and dry the hair by gently dabbing with a towel.

Frequency of use: in the case of autologous transplant, the surgeon will define the frequency of use; in the case of an artificial transplant, we recommend using the shampoo mousse for three washes a week. In any case, it is advisable, in any case, to contact your trusted dermatologist who will know how to personalize its use both in the case of autologous and artificial transplantation.

Active:

ALLANTOIN

Allantoin is a substance with recognized healing properties and is used for its soothing and anti-irritant properties, it promotes healing, stimulating cell proliferation. A powerful antioxidant action is also associated with the soothing action.

PANTROFINA

Functional botanical ingredient consisting of Maritime Pine Bark Extract. This plant thrives in windy and sunny places and in order to survive it has developed substances that protect and defend the plant from external aggressions. The powerful extract of the bark strengthens the stem, nourishing it from the root and protects it from daily pollution.

SALICYLIC ACID

Salicylic acid has a purifying action on the scalp and facilitates elimination of the scales reducing the sensation of itching. Removes dead cells that remain on the hair and scalp. It helps keep the epidermis clean and hygienically pure, increasing its hydration.

UREA

Urea is a substance widely used in cosmetic and dermatological products for its moisturizing, softening, smoothing and keratolytic properties. It promotes (like salicylic acid) the detachment of dead cells and, consequently, skin regeneration.

Amino Acids Complex

(Sodium PCA, Sodium Lactate, Arginine, Aspartic Acid, PCA, Glycine, Alanine, Serine, Valine Proline, Threonine, Isoleucine, Histidine, Phenylalanine)

Amino acid blend developed to create a new hair care technology. They act as a wetting, nourishing and conditioning, repairing and moisturizing agent. Their bond strengthens the structure and gives shine to the hair, improves combability, releasing softness and silkiness. They protect the color of dyed hair.
